### Instructions

Each question has **four proposed answers** (A to D) and **one and only one** correct solution. Two *implicit solutions* apply to **every** question, even though they are not printed under it:

**n** *None* : no proposed answer is correct

**all** *All* : all four proposed answers are correct

For **each** question, mark on the answer sheet one answer (A, B, C, D, n or all) **and** one degree of confidence (DC). If you change your mind, use the **second line** of that question: it replaces the first one. If you tick an answer but no degree of confidence, **DC 3** is applied by default.

| DC | Probability of being correct | If correct | If wrong |
|----|------------------------------|------------|----------|
| 0  | 0 – 25 %                     | +13        | +4       |
| 1  | 25 – 50 %                    | +16        | +3       |
| 2  | 50 – 70 %                    | +17        | +2       |
| 3  | 70 – 85 %                    | +18        | 0        |
| 4  | 85 – 95 %                    | +19        | –6       |
| 5  | 95 – 100 %                   | +20        | –20      |

**Student ID:** write your 8 digits in the boxes, then fill one bubble per column.

**Answers:** one bubble per line for the answer (A–D, n = none of them, all = all of them) and one for the degree of confidence (DC 0–5; **DC 3** if you give none).

**Changing your mind:** fill the *second line* of the question. It replaces the first line. Only one change is allowed.

**Do not** erase or use correction fluid on the first line.
